SUMMARY

I graduated from Informatics Engineering and started my career as a network engineer. I have a strong interest and enthusiasm for the networking field. I have a strong basic knowledge of enterprise networking concepts and protocols, and have a passion for learning further and developing my skills in managing and designing efficient networks.

EXPERIENCE

Fortinet Network Engineer | April 2024 - Present

Freelance | Jakarta, Indonesia

Collaborate with the project team to ensure each step goes according to plan, as well as providing necessary technical support and documentation.

- Responsible for preparing technical documents and network implementation plans for reference and approval.
- Prepare configuration and perform physical installation of network devices on the rack.
- Test network connectivity and performance to ensure all devices are functioning as planned, and provide post-implementation technical support to troubleshoot issues as they arise.
- Prepare final implementation reports that include technical details and test notes as well as provide user guides.

Network Engineer | November 2023 – May 2024

PT. Net Sistem Infotama, | Jakarta, Indonesia

My job desk includes network installation, troubleshooting, maintenance, and also network monitoring where the devices I handle are Cisco Switches, Fortigate, FortiSwitch and Access Point.

- Prepare configuration and Test network connectivity and performance to ensure devices are functioning properly.
- Responsible for providing post-implementation technical support to solve problems that arise.
- Provide user guides and basic training to internal IT staff.
- Respond quickly to network disruptions or incidents reported by users or monitoring systems.
- Document all incidents and solutions implemented and compile maintenance and monitoring reports for future reference and analysis (Preventive Maintenance).

Network Administrator | February 2020 - Present

RT/RW Net | Pekalongan, Indonesia

I am the network admin and owner of this business. starting from the installation, configuration and monitoring I did it myself this is side hustle.

- Responsible for the installation of network infrastructure, including routers, switches, access points, and cables.
- Conducted thorough troubleshooting to identify problems.
- Updated and upgraded network equipment and software as needed.

Internship IT Support | June 2018 - September 2018

DISKOMINFO JATENG | Semarang, Indonesia

My jobdesk there is network installation, troubleshoots, maintenance, and also monitoring the network with software cacti.

- Provided assistance in maintaining and servicing network hardware components.
- Provided assistance in identifying and diagnosing issues related to the office network infrastructure.
- Configured MikroTik router and UniFi wireless devices.
- Monitored the network's performance and health using network monitoring software, specifically Cacti.
